SPECIALTIES

Walnuts Filberts Pears

SEASON 1915-16

Introduction

Established by Felix Gillet in 1871 this nursery has for forty-five years supplied discriminating planters with the best of trees, plants, vines, etc. The planter must depend to a greater or less extent on the nurseryman to supply him with the most approved varieties and rootstocks. His greatest safeguard then is to place his orders with a well established concern, whose reputation over a long period of years justifies his confidence. Making a specialty as we are of **nut stock** and **pears** planters can be assured of highest quality of trees, choicest varieties and approved root stocks.

Our nursery is in the Sierra Nevada mountains at 2600 feet elevation. Nursery stock grown at this altitude is hardy, vigorous and well ripened.

Our mission is to sell trees that satisfy and develop profits for the planter.

Terms: Our terms are invariably cash, either with the order or prior to date of shipment.

Packing: No extra charge is made for packing.

Guarantee of Genuineness: In growing and furnishing all nursery stock every care and precaution is exercised to have it true to name; still with all our care, mistakes are liable to be made, but we hold ourselves in readiness, on proper proof, to replace all stock that may be untrue to label, free of charge, or to refund the amount paid. This statement is due notice to purchasers of nursery stock of the extent of our liability after the same has been accepted by the buyer.

Grading: While we list most of our stock by height we reserve the right to grade also by diameter or caliper basis as follows: Measurement being made one inch above the collar.

$\frac{3}{4}$ to 1 inch caliper	6-8 foot trees
$\frac{1}{2}$ to $\frac{5}{8}$ inch caliper	4-6 foot trees
$\frac{3}{8}$ to $\frac{1}{2}$ inch caliper	3-4 foot trees
$\frac{1}{4}$ to $\frac{3}{8}$ inch caliper	2-3 foot trees

Eureka—Nuts large and of Franquette type, smooth light colored shell, which is tightly sealed. Kernel white, plump, completely filling shell. Of extra fine quality, sweet and nutty. Tree vigorous, upright grower, comes into bearing early and when of good size, heavily productive. Late blooming and very resistant to blight. Oregon growers should give this variety a thorough trial.

Concord—A choice variety producing heavily of large round nuts of handsome appearance. Blooms fairly late though earlier than Franquette and Mayette.

Pears

On Blight Resistant Roots.

We advise only the **Japan Root** for pears because it is not only **Resistant to Blight**, but the **Root Aphis** as well.

Orchardists of long experience appreciate this great advantage and new planters will make a costly mistake if they set any trees on the French root.

We have used this root exclusively for the past five years and cannot too strongly caution planters to avoid the French root, which is highly susceptible to blight. Even in sections where the pear blight is now absent or only mildly prevalent the **Japan Root** should be used.

Trees on this root are very scarce throughout the country, so if you contemplate planting this season **your order should be placed a once.**

We do not require payment until time for shipment.

Let us have your order now so you will be protected, for the demand will be greater than the supply; of that we are certain.

Our trees are particularly fine, being stocky, with well branched root system.

Our 3-5 ft. trees are superior to ordinary 3-4 size and equal in caliper most 4-6 trees.

Strawberries

We do not propagate strawberry plants, but sell Etters famous varieties direct from the grower. These berries are **superior** to anything else on the market either for home use, shipping or canning. They are exceedingly thrifty growers and enormous bearers of **large extra fine flavored** berries.

No home garden is complete without a few of Etters choice varieties. Special catalogue on request.
